

WHY CHOOSE KVR-R?

ADJUSTABLE CONSTANT AIR VOLUME DAMPERS

Adjustable air flow between 15 and 700 m³/h

- Entirely adjustable within the physically adjustable air flow of the volume dampers, with minimal deflection.

Self-regulating between 50 Pa and 250 Pa

- Fully self-regulating with working capacity between pressures of 50 Pa and 250 Pa in order to reach a balanced duct network.
- High pressure possible with the KVR-R HP.

Synthetic parts

- Very low-maintenance, produced from fire retardant, self-extinguishing black synthetics for ventilation applications up to 60°C. Reinforcement with frame in galvanized steel from Ø 150 mm.

Airtight assembly

- Volume dampers equipped with rubber gasket to ensure air-tightness in ducts from diameters Ø 80 to Ø 250 mm.

Versatile

- Useable for both air supply as for air extraction.

Stock and delivery times

- Large range of pre-adjusted KVR-R with different air flows in stock, in order to provide faster and better service.
