# 1 User manual

Dear client,

Thank you for buying the Wireless Controller. This user's manual contains all required information to quickly become familiar with the product. We kindly request you to carefully go through this information before using the product. This user's manual is intended for the Wireless Controller installer and end user.

Take good care of this user's manual! For more information or ordering manuals, please contact:

Brink Climate Systems B.V.  
P.O. Box 11  
NL-7950 AA, Staphorst, The Netherlands  
T: +31 (0) 522 46 99 44  
F: +31 (0) 522 46 94 00  
E: info@brinkclimatesystems.nl  
www.brinkclimatesystems.nl

## 1.1 Description Wireless Controller

### Intended and unintended use

This manual is about the Wireless Controller (See A in image below).

The Wireless Controller should only be used in combination with products that have been approved by Brink Climate Systems B.V.

The Wireless Controller can only be used with a heat recovery unit (HRU) appliance which is equipped with a USB connection and produced after July 2022! A remote control (A, B or C) also displays when the filter(s) needs to be replaced/ cleaned or when the ventilation system is malfunctioning. Brink supplies a range of wireless remote controls/sensors that make contact with a heat recovery unit (HRU) appliance by means of a USB transceiver. This range consists of the 5 following types of wireless controllers/sensor (A-E)

The connected HRU appliance is operated by pressing one of the buttons on the Wireless Controller. For explanation of the buttons of the Wireless Controller see → [Overview operational controls](#) page 6.

The Wireless Controller must always be used with a USB transceiver on the HRU appliance; a combination of multiple sensors/controllers on 1 USB transceiver is possible.

Buttons 1 till 4 are used for pairing a sensor/controller to the USB transceiver; each sensor/controller is assigned an NODE ID number under which the sensor/controller is registered in the HRU appliance. In total, a maximum combination of 12 controllers /sensors can be paired to 1 transceiver (Max. 4 controllers / max. 4 CO<sub>2</sub>-sensors and max 4 humidity sensors).

**Note:** A controller with a build in CO<sub>2</sub>-sensor is seen as an CO<sub>2</sub>-sensor and a controller with a build-in humidity sensor will be seen as an humidity sensor.

When one or more CO<sub>2</sub> sensors are connected to the HRU appliance, it will ventilate according to the set conditions of the connected CO<sub>2</sub> sensor(s).

If multiple sensors are used, the sensor that requests the highest ventilation level always has priority; If multiple controllers are used, the last used ventilation level has priority.

When the holiday mode (  ) is used (only if this option is available); humidity control / CO<sub>2</sub> control (only if applicable) is not effective!

The air flow quantities associated with the ventilation settings must always be set on the connected appliance and cannot be adjusted on the Wireless Controller. For ventilation settings, see the installation manual of the relevant connected HRU appliance.

## 1.2 Delivery content

Check that delivered Wireless Controller is complete and not damaged.

*The delivery content of the Wireless Controller consists of the following components:*

The delivery content does not include the optionally available permanent power supply which can be ordered from Brink under part number 532924.

# 2 Technical specification

## 2.1 General product specification

### Product description

Name: Wireless Controller

### Technical product specifications

Operating voltage: 3 V

Protection class: IP21

Type of battery : CR2032.MRF Lithium (preferred manufacturer Renata or Panasonic CR-2032/BS )

#### **Not applicable if a permanent power supply is used!**

Battery performance

**Battery performance will drastically deteriorate when no connection to the USB transceiver in the HRU appliance can be made!**

For example out-of-range or removed from the USB slot. Please remove the battery when storing the sensor/controller.

Frequency: 868 MHz

Color: RAL 9010 (White)

### Ambient conditions

Ambient temperature: 0 °C to 50 °C

Storage temperature: -20 °C to 60 °C

Humidity: 0% to 90%

Other: For indoor use only

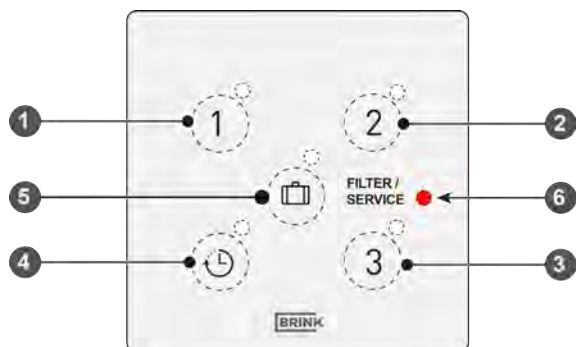

Range 300 m (open field; 1 meter height)

## 2.2 Environment influences

The Wireless Controller should be placed and used in a space with the correct ambient conditions for proper operation. The Wireless Controller may only be mounted indoors, but not close to a heat source, a radiator, in a extreme humid environment. The Wireless Controller may also not be exposed to direct radiation heat (sun light). The Wireless Controller may also not be mounted close to a magnetic field. This could damage internal components.

## 2.3 Overview operational controls

The Wireless Controller has a number of (capacitive) buttons. Each button is equipped with a LED (white).

1. *Button ventilation level 1*
2. *Button ventilation level 2*
3. *Button ventilation level 3*
4. *Button boost function*
5. *Button holiday mode*
6. *Filter/fault indication LED (red)*

### Button 1

When button 1 is operated, the HRU appliance will be set to ventilation level 1 (basic ventilation during absence); the white LED next to button 1 will flash once as "button press" confirmation.

### Button 2

When button 2 (sufficient ventilation during presence) is operated, the HRU appliance will be set to ventilation level 2; the white LED next to button 2 will flash once as "button press" confirmation.

### Button 3

When button 3 (maximum ventilation during cooking/showering) is operated, the HRU appliance will be set to ventilation level 3; the white LED placed next to button 3 will flash once as "button press" confirmation.

### Button 4 / Boost (🕒)

When button 4 is operated, the HRU appliance will run for 30 minutes at ventilation level 3 (boost function) and then again at the previous ventilation position; the white LED placed next to button 4 will flash once as "button press" confirmation.

### Button 5 (👛)

When button 5 (minimum ventilation) is operated, the HRU appliance will be set to ventilation level 0 (holiday position); the white LED next to button 5 will blink once as "button press" confirmation.  
(If applicable: CO<sub>2</sub>-sensor auto-mode & RH-sensor disabled)

### Filter/ fault LED

This red LED indicates when filter(s) must be cleaned / replaced or when a malfunction has occurred in the connected HRU appliance.

### Filter notification

The filter(s) in the HRU appliance, connected to the Wireless Controller, should be cleaned or replaced when the red LED on the Wireless Controller appears.

This LED is on for 10 seconds every 3 hours or for 300 seconds if any of the buttons are operated (Wireless Controller with battery power supply).

When the Wireless Controller is equipped with a permanent power supply (optional) this LED is permanently on.

Resetting of the filter notification is not possible with the Wireless Controller!

Consult the manual of the HRU appliance connected to the Wireless Controller for resetting filter notification.

6 = LED Filter notification

### Fault notification

If there is a fault in the HRU appliance, connected to the Wireless Controller, the red LED on the Wireless Controller flashes with frequency of 1 Hz (1 blink per second).

This LED flashes for 10 seconds every 3 hours or for 300 seconds if any of the buttons are operated (Wireless Controller with battery power supply).

When the Wireless Controller is equipped with a permanent power supply (optional) this LED flashes permanently.

See the installation instructions of the HRU appliance connected to the Wireless Controller for troubleshooting for the error notifications indicated on the Wireless Controller.

6 = LED fault indication (flashes 1Hz)

### Lost connection

When the Wireless Controller lost connection with the USB-transceiver the fault LED will also flash.

The LED flashes 3 times 0.5 seconds ON and 60 seconds OFF or flashes for 300 seconds if any of the buttons are operated (Wireless Controller with battery power supply).

Filter and fault notifications are overruled.

6 = LED (flash 0.5 sec on - 60 sec off )

# 3 Assembly

## 3.1 Mounting Wireless Controller on the wall

You should perform the **step 1** to **step 4** to assemble the Wireless Controller. An example of a wireless controller is shown in this section, but other wireless controllers/sensors are assembled in the same way.

### Step 1

The wall bracket can be attached to a flush mount electrical box (Ø 55 mm) or can be directly mounted on the wall with supplied double sided adhesive tape. Mounting on a electrical box is only necessary when a permanent power supply (option) is used. The Wireless Controller should be placed at a height of approximately 1.65 meters above the floor.

- Screw or glue the wall bracket onto the wall in the correct position.

#### Take note!

**The up arrow on the wall bracket must point upwards!**

Backside wall bracket with position double sided adhesive tape

### Step 2

Remove the plastic isolation strip from the battery.

### Step 3

Click the Wireless Controller (A) together with supplied frame (B) on the wall bracket (C).

After mounting the Wireless Controller on the wall bracket, remove the foil from the front.

### Step 4

When the Wireless Controller has been fitted on the wall, the USB transceiver\* can be placed in the USB port of the HRU appliance which must be connected with the Wireless Controller. To connect the USB transceiver with HRU appliance see → [Connecting with USB Transceiver \[Pairing\]](#) page 12 .

\* The USB transceiver is not included in the scope of delivery of the Wireless Controller and must be ordered separately!

## 3.2 Remove Wireless Controller from wall bracket

For removing the Wireless Controller from the wall bracket grasp the front of the Wireless Controller by edges and gently pull away from wall.

*An example of a wireless controller is shown in this section, but other wireless controllers/sensors can be removed from the wall bracket in the same way.*

## 3.3 Connecting permanent power supply (option)

### Warning!

At all times disconnect the 230 V. mains supply when connecting a permanent power supply.

This optional permanent power supply can be ordered from Brink under article code 532924. When using this optional permanent power supply, the wall bracket must be attached to a electrical wall box (Ø 55 mm). Connect the optional permanent power supply (A) with the Wireless Controller (B) conform the wiring diagram. The following 5 actions should be performed to connect the optional permanent power supply:

### Step 1

- Place the power supply (A) in the electrical wall box.
- The 230V mains supply must be connected to the factory mounted gray connectors. Strip the wire over a length of approx. 7 mm.

### Step 2

- Feed the red and black wires including mounted green connector through the square hole in the in the wall bracket and screw the wall bracket on the electrical wall box.

- Take note!**  
**The up arrow on the wall bracket must point upwards!**

A. Permanent power supply  
(230V~/5V=)

B. Wireless Controller

X1 = Black  
X2 = Red  
X3 = Brown  
X4 = Blue

### Step 3

- After feed the red and black wire with the green connector through the frame (B) connect this to the connector on the back side of the Wireless Controller (A).
- Removal of the battery (if mounted) is not required but recommended.

### Step 4

- Click the Wireless Controller (A) together with connected red and black wires and the frame (B) on the wall bracket (C).
- After mounting the Wireless Controller on the wall bracket, remove the foil from the front.
- Reconnect the 230 V. mains supply.

### Step 5

- When the Wireless Controller has been fitted on the wall the USB transceiver\* can be placed in the USB port of the appliance which must be connected with the Wireless Controller. To connect the USB transceiver with HRU appliance see → [Connecting with USB Transceiver \(Pairing\)](#) page 12 .
- \* The USB transceiver is not included in the scope of delivery of the Wireless Controller and must be ordered separately!

### 3.4 Using another frame (option)

The Wireless Controller consists of a wall bracket (C), a frame (B) and the wireless controller (A). The wall bracket (C) is designed in such a way that also a large number of frames from other vendors can be used.

Products are supplied with Brink frame as standard. This frame can be replaced by frames from the other manufacturers and series. Appearance and tolerances vary by manufacturer. The following types of frames can be used instead of the standard frame:

- A. Gira - System 55
- B. Busch Jaeger Balance/Reflex SI
- C. Jung AS
- D. Siemens Delta
- E. Berker S.1
- F. Merten System M

*The above mentioned alternative frames are not included in the Brink delivery program!*

# 4 Put into use

## 4.1 Connecting with USB Transceiver (Pairing)

When the Wireless Controller is mounted on the wall and the USB transceiver is placed in the HRU appliance (see image on the right), the two can be connected (pairing).

For a HRU appliance equipped with a display, the USB symbol (  ) is visible as confirmation that the USB transceiver has been "recognised"; for a HRU appliance without a display, this USB symbol will be visible in the app. If the USB symbol is not visible, your HRU appliance is probably equipped with a software version before July 2022 and it is not possible to connect the Wireless Controller.

Follow the steps as described below.

**Note:** For battery-powered Wireless Controller, the LEDs turn off automatically after 300 seconds to save battery power. After touching any button, the LEDs turn on again!

### Step 1

Apply mains power supply to the HRU appliance.

### Step 2

Press the pairing button of the USB transceiver (more than 3 seconds and less than 10 seconds)

The green LED on the USB transceiver starts flashing (1x per second). The pairing mode is active for 10 minutes.

### Step 3

Press the pairing button ( >2 sec & < 10 sec) on the bottom of the controller (through a small hole), for example with the end of a paper clip. When the pairing button is properly pressed, one feels a "click".

Pairing enabled when four LEDs light in turn (0.5 sec. ON and next will ON when previous is OFF).

Pairing disabled when Filter/service LED is ON for two seconds. When pairing is not successful set Wireless Controller back to factory setting and try to pair Wireless Controller again.

#### Step 4

Choose under which number the sensor should be registered by configuring a "NODE ID"; press any of the four buttons on the Wireless Controller (do not use the holiday button ). For example press button 2; LED 2 will flash once.

When there are more Wireless Controller to connect with the device, press different buttons; the number of the button is also the number of connected CO<sub>2</sub>-sensor in the menu of the HRU appliance.

If pairing is not successful go back to Step 3. Check also the USB transceiver.

## 4.2 Back to factory setting Wireless Controller

It is possible to set the Wireless Controller back to factory settings. Perform the following actions for both controller(s) and the USB transceiver:

#### Factory setting Wireless Controller

- Press the pairing button (for example with end of a paperclip) for more than 20 seconds. When the pairing button is properly pressed, one feels a "click".
- To confirm this reset all 5 LED's will flash two times (0,5 second on and 5 seconds off).
- All the pairing information has been deleted from the Wireless Controller.

#### Factory setting USB transceiver

- Press the button on the USB transceiver for more than 20 seconds.
- To confirm this reset, the green LED on the USB transceiver will flash two times.
- All the pairing information has been deleted from the USB transceiver.

# 5 Maintenance

## 5.1 General maintenance

### Careful!

Clean the Wireless Controller with a soft cloth.  
Never apply water and/or (cleaning) liquid to the Wireless Controller.

## 5.2 Replace battery

### Replace battery

If there is no response to the operation of the buttons and the LED no longer lights up if buttons are operated, the battery voltage is too low. (Not applicable if the optional permanent power supply interface is used.)

Replace battery with correct type CR2032.MRF battery manufacturer Renata (or Panasonic CR-2032/BS ).

Pay attention to the position of the battery! The text marked "+" must always be legible after inserting the battery.

For replacing battery take Wireless Controller from the wall bracket (see → [Remove Wireless Controller from wall bracket](#) page 9).

A. Front side Wireless Controller

B. Back side Wireless Controller

# 6 Environment

## Take note!

The Wireless Controller may not be removed as unsorted urban waste, but should be treated separately.

Make enquiries within your own region, where the Wireless Controller can be handed in when use has been terminated. Do not throw away electrical devices or parts, but check if (parts of) the Wireless Controller cannot be handed in, recycled or re-used.

## RoHS-compliance

This product meets Directive 2011/65/EU of the European Parliament and the Council of 27 January 2003 regarding using certain environmentally hazardous substances in electronic equipment (RoHS) and the amendments to the directive.

## WEEE-notification

The WEEE-directive (Waste Electrical and Electronic Equipment), which came into force, as European law, on 13 February 2003, has resulted in an important change in treating electronic equipment at the end of their use cycle. This directive's objective is, firstly, preventing electronic equipment in waste and moreover promoting re-use, recycling and other forms of recovering such waste in order to limit the amount of waste.

The WEEE-logo on a product or on the packaging indicates that this product may not be disposed of or thrown away with domestic waste. You should dispose of all your old electronic or electrical equipment via special collection points for such dangerous waste. Separate collection and correct treatment of our old electronic and electrical equipment help us to maintain our natural resources.

Moreover, correct recycling guarantees the safety and health of humankind and the environment. For more information on processing electronic and electrical equipment, re-use and collection points, please contact your municipality, your local waste disposal company, the supplier from whom you purchased the device or the device's manufacturer.

WEEE logo

## Handing in and recycling

Make enquiries within your own region, where the Wireless Controller can be handed in when use has been terminated. Do not throw away electrical devices or parts, but check if (parts of) the Wireless Controller cannot be handed in, recycled or re-used.

# 7 Troubleshooting and guarantee

## 7.1 Guarantee

The Wireless Controller has been manufactured by Brink Climate Systems B.V. with care and in accordance with high quality standards. The Wireless Controller operation is guaranteed for a period of two years from the time of delivery. This guarantee is granted in accordance with Brink Climate Systems B.V. General Terms and Conditions. These can be found on [www.brinkclimatesystems.nl](http://www.brinkclimatesystems.nl).

Do you want to claim under the guarantee?

You then have to make that known, in writing, via:

Brink Climate Systems B.V.

P.O. Box 11

NL-7950 AA, Staphorst, The Netherlands

The right to guarantee lapses in case of incorrect or improper use of the Wireless Controller and failure to follow the user indications in this user's manual.

### **Warning!**

Making changes to the Wireless Controller hardware or software is not permitted. This can have an effect on the Wireless Controller proper operation and in that case all guarantees lapse.

You are not permitted to open or repair the Wireless Controller or parts of the Wireless Controller by yourself. In that case guarantees lapse.

**Brink Climate Systems B.V.**

Postbus 11, NL-7950AA Staphorst
