The information in this document is for informational purposes only. Please inform HMS Networks of any inaccuracies or omissions found in this document. HMS Networks disclaims any responsibility or liability for any errors that may appear in this document.

HMS Networks reserves the right to modify its products in line with its policy of continuous product development. The information in this document shall therefore not be construed as a commitment on the part of HMS Networks and is subject to change without notice. HMS Networks makes no commitment to update or keep current the information in this document.

The data, examples and illustrations found in this document are included for illustrative purposes and are only intended to help improve understanding of the functionality and handling of the product. In view of the wide range of possible applications of the product, and because of the many variables and requirements associated with any particular implementation, HMS Networks cannot assume responsibility or liability for actual use based on the data, examples or illustrations included in this document nor for any damages incurred during installation of the product. Those responsible for the use of the product must acquire sufficient knowledge in order to ensure that the product is used correctly in their specific application and that the application meets all performance and safety requirements including any applicable laws, regulations, codes and standards. Further, HMS Networks will under no circumstances assume liability or responsibility for any problems that may arise as a result from the use of undocumented features or functional side effects found outside the documented scope of the product. The effects caused by any direct or indirect use of such aspects of the product are undefined and may include e.g. compatibility issues and stability issues.

2. General Information

2.1. Intended Use of the User Manual

This manual contains the main features of this Intesis gateway and the instructions for its appropriate installation, configuration, and operation.

The contents of this manual should be brought to the attention of any person who installs, configures, or operates this gateway or any associated equipment.

Keep this manual for future reference during the installation, configuration, and operation.

2.2. General Safety Information

IMPORTANT

Follow these instructions carefully. Improper work may seriously harm your health and damage the gateway and/or any other equipment connected to it.

Only technical personnel, following these instructions and the country legislation for installing electrical equipment, can install and manipulate this gateway.

Install this gateway indoors, in a restricted access location, avoiding exposure to direct solar radiation, water, high relative humidity, or dust.

All wires (for communication and power supply, if needed) must only be connected to networks with indoor wiring. All communication ports are considered for indoor use and must only be connected to SELV circuits.

Disconnect all systems from their power source before manipulating and connecting them to the gateway.

Respect the expected polarity of power and communication cables when connecting them to the gateway.

2.3. Admonition Messages and Symbols

DANGER

Instructions that must be followed to avoid an imminently hazardous situation that, if not avoided, will result in death or severe injury.

WARNING

Instructions that must be followed to avoid a potentially hazardous situation that, if not avoided, could result in death or severe injury.

CAUTION

Instruction that must be followed to avoid a potentially hazardous situation that, if not avoided, could result in minor or moderate injury.

IMPORTANT

Instruction that must be followed to avoid a risk of reduced functionality and/or damage to the equipment or to avoid a network security risk.

**NOTE**

Additional information which may facilitate installation and/or operation.

**TIP**

Helpful advice and suggestions.

**NOTICE**

Remarkable Information.

3. Overview

NOTE

You can set this IN485FGL001I000 gateway as a BACnet MS/TP or a Modbus RTU server device using the DIP switch block SW1 (position 5). See [DIP switches \(page 68\)](#).

3.1. Introduction

This document describes the integration of Fujitsu air conditioning (AC) systems into BACnet or Modbus installations using the Intesis gateway.

The aim of this integration is to monitor and control your Fujitsu AC system using any BACnet or Modbus software solution to remotely monitor and control your installation. To do so, the gateway allows BACnet or Modbus communication by polling or subscription requests (COV).

The gateway makes Fujitsu AC indoor units available through independent BACnet objects/Modbus registers to set the AC system properties and functionalities. The gateway allows ID mapping of fixed BACnet objects. The configuration process is very easy with the built-in DIP switch blocks. For more information, see [Connections and Switches \(page 67\)](#).

NOTE

This document assumes that the user is familiar with BACnet, Modbus, and Fujitsu technologies and their technical terms.

3.2. General Functionality

The role of the gateway is to link the elements of Fujitsu AC units to BACnet objects/Modbus registers.

The Intesis gateway continuously reads the Fujitsu AC system and stores the status of all objects/registers in its memory, ready to be served when requested from the BACnet/Modbus side.

The gateway also sends commands to the Fujitsu AC system to control indoor units.

3.3. Gateway Capacity

This Intesis gateway can integrate one single Fujitsu AC unit and its associated elements.

Table 1. Gateway capacity

Element	Max
Number of indoor units that the gateway can control	1
Number of Fujitsu AC signals available as objects in the gateway	48
Number of AC signals available as Modbus registers	34

3.4. Quickstart Guide

IMPORTANT

Disconnect all systems from the power source before connecting them to the gateway.

NOTE

DIN rail mounting inside a grounded cabinet or metal enclosure is recommended.

1. Mount the Intesis gateway in the desired installation site.
2. Connect the gateway to the BACnet/Modbus network via its EIA-485 port.
3. Connect the supplied AC connection cable. See details in [Connection Procedure \(page 67\)](#).
4. Configure the gateway using the built-in DIP switches. See details in [DIP switches \(page 68\)](#).

NOTE

Use the SW1 DIP switch's position 5 to set the gateway as a BACnet or Modbus server device:

- BACnet MS/TP: Position 5 is off (down). This is the default setting.
- Modbus RTU: Position 5 is on (up).

5. Check the communication performance between the BACnet/Modbus bus and the AC system through the gateway's LED indicators. See details in [LED Status \(page 70\)](#).
6. The Intesis gateway is ready to be used in your system.

4. BACnet Application Specifications

The following sections provide the gateway's specifications when set as a BACnet MS/TP server device.

4.1. Protocol Implementation Conformance Statement

BACnet Protocol Implementation Conformance Statement (PICS)

Date: 2023-05-01

Vendor Name: Intesis (HMS Industrial Networks SLU)

Product Name: Intesis Air Conditioning Interface Series 2E

Product Model Number: Intesis Air Conditioning Interface Series 2E

Application Software Version: 1.0

Firmware Revision: 1.0.0.0

BACnet Protocol Revision: 15

Product Description:

Fujitsu air conditioning system - BACnet MS/TP or Modbus RTU.

Abstraction of Fujitsu air conditioning system properties and functionalities as BACnet objects/Modbus registers.

4.1.1. BACnet Standardized Device Profile (Annex L)

- BACnet Operator Workstation (B-OWS)
- BACnet Building Controller (B-BC)
- BACnet Advanced Application Controller (B-AAC)
- BACnet Application Specific Controller (B-ASC)
- BACnet Smart Sensor (B-SS)
- BACnet Smart Actuator (B-SA)

Additional BACnet Interoperability Building Blocks Supported (Annex K): Reference of BIBBs List.

4.1.2. Segmentation Capability

Segmented request supported: No Yes Window Size 16.

Segmented responses supported: No Yes Window Size 16.

4.1.3. Data Link Layer Options

- BACnet/IP, (Annex J)
- BACnet/IP, (Annex J), Foreign Device
- ISO 8802-3, Ethernet (Clause 7)
- ANSI/ATA 878.1, 2.5 Mb. ARCNET (Clause 8)

- ANSI/ATA 878.1, RS-485 ARCNET (Clause 8), baud rate(s) _____
- MS/TP manager (Clause 9), baud rate(s): 9600, 19200, 38400, 76800, 115200
- MS/TP subordinate (Clause 9), baud rate(s):
- Point-To-Point, EIA 232 (Clause 10), baud rate(s):
- Point-To-Point, modem, (Clause 10), baud rate(s):
- LonTalk, (Clause 11), medium: _____
- Other:

4.1.4. Device Address Binding

Is static device binding supported? (This is currently necessary for two-way communication with MS/TP subordinates and certain other devices). Yes No

4.1.5. Networking Options

- Router, Clause 6 - List all routing configurations, e.g., ARCNET-Ethernet, Ethernet-MS/TP, etc.
- Annex H, BACnet Tunneling Router over IP.
- BACnet/IP Broadcast Management Device (BBMD).

4.1.6. Character Sets Supported

Indicating support for multiple character sets does not imply that they can all be supported simultaneously.

- IBMTM/MicrosoftTM DBCS
- JIS C 6226
- ISO 10646 (UCS-4)
- ISO 10646 (UCS-2)
- ISO 10646 (UTF-8)
- ISO 8859-1

4.1.7. Gateway

If this product is a communication gateway, describe the types of non-BACnet equipment/network(s) that the gateway supports:

Fujitsu air conditioning system - BACnet MS/TP or Modbus RTU.

4.2. BACnet Interoperability Building Blocks Supported (BIBBs)

4.2.1. Data Sharing BIBBs

BIBB Type		Active	BACnet Service	Initiate	Execute
DS-RP-A	Data Sharing-ReadProperty-A	<input type="checkbox"/>	ReadProperty	<input checked="" type="checkbox"/>	<input type="checkbox"/>

4.4.3. Objects and Properties

4.4.3.1. Fujitsu AC Gateway (Device Object Type)

Object_Identifier: The gateway can be identified in the BACnet network automatically or manually:

- Automatic addressing (default):** This mode uses a base address of 146000 + the MAC address number selected in the DIP switch SW2.
- Manual addressing:** The gateway switches to this mode when this property receives a value from the BACnet side.

IMPORTANT

During the manual addressing mode, the gateway will not consider the MAC address configured with the DIP switch SW2.

IMPORTANT

If **Object_Identifier** is overwritten from BACnet, the DIP switch SW2 configuration will not be considered for device instance calculation until the gateway is reset to the factory settings. See [Restore the Factory Settings \(page 72\)](#).

Object_name: In the **Device Object**, is configurable writing directly on this property.

Description: In the **Device Object**, is configurable writing directly on the property. Max. length: 63 characters.

Max_Pres_Value	REAL	31°C / 88°F	O	R
Resolution	R	-	O	-
COV_Increment	REAL	0	O	W
Priority_Array	BACnetPriorityArray	BACnetPriorityArray	R	R
Relinquish_Default	Unsigned	22	R	R
Time_Delay	Unsigned	-	O	-
Notification_Class	Unsigned	-	O	-
High_Limit	REAL	-	O	-
Low_Limit	REAL	-	O	-
Deadband	REAL	-	O	-
Limit_Enable	BACnetLimitEnable	-	O	-
Event_Enable	BACnetEventTransitionBits	-	O	-
Acked_Transitions	BACnetEventTransitionBits	-	O	-
Notify_Type	BACnetNotifyType	-	O	-
Event_Time_Stamps	BACnetArray[N] of BACnetTimeStamp	-	O	-
Profile_Name	CharacterString	-	O	-

NOTE

You can set the temperature scale in Celsius or Fahrenheit scale via DIP switches. More information in [DIP switches \(page 68\)](#).

4.4.3.8. FanSpeed_status (Multistate Input Object Type)

It indicates the indoor unit's fan speed.

Property Identifier	Property Datatype	Value	ASHRAE	Gateway
Object_Identifier	BACnetObjectIdentifier	(Multistate Input, 1)	R	R
Object_Name	CharacterString	FanSpeed_status	R	R
Object_Type	BACnetObjectType	MULTISTATE_INPUT (13)	R	R
Present_Value	Unsigned	1 .. 7	R	R
Description	CharacterString	-	O	-
Device_Type	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE/TRUE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0), UNRELIABLE_OTHER (7)	O	R
Out_Of_Service	BOOLEAN	FALSE/TRUE	R	R
Number_Of_States	Unsigned	7	R	R
State_Text	BACnetArray[N] of CharacterString	Check the Fan speed status table below.	O	R
Time_Delay	Unsigned	-	O	-
Notification_Class	Unsigned	-	O	-
Alarm_Values	List of Unsigned	-	O	-
Fault_Values	List of Unsigned	-	O	-
Event_Enable	BACnetEventTransitionBits	-	O	-
Acked_Transitions	BACnetEventTransitionBits	-	O	-
Notify_Type	BACnetNotifyType	-	O	-
Event_Time_Stamps	BACnetArray[N] of BACnetTimeStamp	-	O	-
Profile_Name	CharacterString	-	O	-

Table 4. Fan speed status

Present_Value	State_Text
1	Auto
2	Fan Speed 1
3	Fan Speed 2
4	Fan Speed 3
5	Fan Speed 4
6	Fan Speed 5
7	Fan Speed 6

4.4.3.9. FanSpeed_command (Multistate Output Object Type)

It sets the indoor unit's fan speed.

Property Identifier	Property Datatype	Value	ASHRAE	Gateway
Object_Identifier	BACnetObjectIdentifier	(Multistate Output, 1)	R	R
Object_Name	CharacterString	FanSpeed_command	R	R
Object_Type	BACnetObjectType	MULTISTATE_OUTPUT (14)	R	R
Present_Value	Unsigned	1 .. 7	R	W
Description	CharacterString	-	O	-
Device_Type	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0)	O	R
Out_Of_Service	BOOLEAN	FALSE	R	R
Number_Of_States	Unsigned	7	R	R

Notify_Type	BACnetNotifyType	-	O	-
Event_Time_Stamps	BACnetArray[N] of BACnetTimeStamp	-	O	-
Profile_Name	CharacterString	-	O	-

NOTE

You can set the temperature scale in Celsius or Fahrenheit scale via DIP switches. More information in [DIP switches \(page 68\)](#).

NOTE

For further information about the Room Temperature object, see [Considerations on BACnet Temperature Objects \(page 54\)](#)

4.4.3.15. ErrorCode (Analog Input Object Type)

It indicates the AC system's current error.

Property Identifier	Property Datatype	Value	ASHRAE	Gateway
Object_Identifier	BACnetObjectIdentifier	(Analog Input, 2)	R	R
Object_Name	CharacterString	ErrorCode	R	R
Object_Type	BACnetObjectType	ANALOG_INPUT (0)	R	R
Present_Value	REAL	-1 .. 6846	R	R
Description	CharacterString	-	O	-
Device_Type	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0)	O	R
Out_Of_Service	BOOLEAN	FALSE	R	R
Update_Interval	Unsigned	300	O	-
Units	BACnetEngineeringUnits	NO_UNITS (95)	R	R
Min_Pres_Value	REAL	-1	O	-
Max_Pres_Value	REAL	6846	O	-
Resolution	REAL	-	O	-
COV_Increment	REAL	0	O	W
Time_Delay	Unsigned	-	O	-
Notification_Class	Unsigned	-	O	-
High_Limit	REAL	-	O	-
Low_Limit	REAL	-	O	-

Profile_Name	CharacterString	-	O	-

4.4.3.21. FilterSign (Binary Input Object Type)

It indicates the status of the filter, if there's an error or not.

Property Identifier	Property Datatype	Value	ASHRAE	Intesis
Object_Identifier	BACnetObjectIdentifier	(Binary Input, 1)	R	R
Object_Name	CharacterString	FilterSign	R	R
Object_Type	BACnetObjectType	BINARY_OUTPUT (4)	R	R
Present_Value	BACnetBinaryPV	INACTIVE (0) / ACTIVE (1)	R	R
Description	CharacterString	-	O	-
Device_Type	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE/TRUE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0) UNRELIABLE_OTHER (7)	O	R
Out_Of_Service	BOOLEAN	FALSE	R	R
Polarity	BACnetPolarity	NORMAL (0)	R	R
Inactive_Text	CharacterString	OK	O	R
Active_Text	CharacterString	Dirty	O	R
Change_Of_State_Time	BACnetDatetime	-	O	-
Change_Of_State_Count	Unsigned	-	O	-
Time_Of_State_Count_Reset	BACnetDatetime	-	O	-
Elapsed_Active_Time	Unsigned	-	O	-
Time_Of_Active_Time_Reset	BACnetDatetime	-	O	-
Time_Delay	Unsigned	-	O	-
Notification_Class	Unsigned	-	O	-
Feedback_Value	BACnetBinaryPV	-	O	-
Event_Enable	BACnetEventTransitionBits	-	O	-
Acked_Transitions	BACnetEventTransitionBits	-	O	-
Notify_Type	BACnetNotifyType	-	O	-
Event_Time_Stamps	BACnetArray[N] of BACnetTimeStamp	-	O	-
Profile_Name	CharacterString	-	O	-

4.4.3.22. FilterReset (Binary Output Object Type)

It resets the filter signal.

Property Identifier	Property Datatype	Value	ASHRAE	Intesis
Object_Identifier	BACnetObjectIdentifier	(Binary Output, 4)	R	R
Object_Name	CharacterString	FilterReset	R	R
Object_Type	BACnetObjectType	BINARY_OUTPUT (4)	R	R
Present_Value	BACnetBinaryPV	INACTIVE (0) / ACTIVE (1)	W	W
Description	CharacterString	-	O	-
Device_Type	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0)	O	R
Out_Of_Service	BOOLEAN	FALSE	R	R
Polarity	BACnetPolarity	NORMAL (0)	R	R
Inactive_Text	CharacterString	Normal	O	R
Active_Text	CharacterString	Reset	O	R
Change_Of_State_Time	BACnetDatetime	-	O	-
Change_Of_State_Count	Unsigned	-	O	-
Time_Of_State_Count_Reset	BACnetDatetime	-	O	-
Elapsed_Active_Time	Unsigned	-	O	-
Time_Of_Active_Time_Reset	BACnetDatetime	-	O	-
Minimum_Off_Time	Unsigned32	-	O	-
Minimum_On_Time	Unsigned32	-	O	-
Priority_Array	BACnetPriorityArray	BACnetPriorityArray	R	R
Relinquish_Default	BACnetBinaryPV	INACTIVE (0)	R	R
Time_Delay	Unsigned	-	O	-
Notification_Class	Unsigned	-	O	-
Feedback_Value	BACnetBinaryPV	-	O	-
Event_Enable	BACnetEventTransitionBits	-	O	-
Acked_Transitions	BACnetEventTransitionBits	-	O	-

Profile_Name	CharacterString	-	O	-

NOTE

You can set the temperature scale in Celsius or Fahrenheit scale via DIP switches. More information in [DIP switches \(page 68\)](#).

4.4.3.28. OccupancyContinuousCheck (Binary Value Object Type)

It indicates if the system is continuously checking the setpoint and occupancy conditions.

Property Identifier	Property Datatype	Value	ASHRAE	Gateway
Object_Identifier	BACnetObjectIdentifier	(Binary Value, 0)	R	R
Object_Name	CharacterString	OccupancyContinuousCheck	R	R
Object_Type	BACnetObjectType	BINARY_VALUE (5)	R	R
Present_Value	BACnetBinaryPV	INACTIVE (0) / ACTIVE (1)	R	R/W
Description	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0)	O	R
Out_Of_Service	BOOLEAN	FALSE	R	R
Inactive_Text	CharacterString	Disabled	O	R
Active_Text	CharacterString	Enabled	O	R
Change_Of_State_Time	BACnetDatetime	-	O	-

Notify_Type	BACnetNotifyType	-	O	-
Event_Time_Stamps	BACnetArray[N] of BACnetTimeStamp	-	O	-
Profile_Name	CharacterString	-	O	-

4.4.3.29. UnoccupiedDeadbandAction (Binary Value Object Type)

It indicates the action to be performed when Unoccupancy is enabled, and Room Temperature is within the deadband.

Property Identifier	Property Datatype	Value	ASHRAE	Gateway
Object_Identifier	BACnetObjectIdentifier	(Binary Value, 1)	R	R
Object_Name	CharacterString	UnoccupiedDeadbandAction	R	R
Object_Type	BACnetObjectType	BINARY_VALUE (5)	R	R
Present_Value	BACnetBinaryPV	INACTIVE (0) / ACTIVE (1)	R	R/W
Description	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0)	O	R
Out_Of_Service	BOOLEAN	FALSE	R	R
Inactive_Text	CharacterString	Off	O	R
Active_Text	CharacterString	CurrentMode	O	R
Change_Of_State_Time	BACnetDatetime	-	O	-
Change_Of_State_Count	Unsigned	-	O	-
Time_Of_State_Count_Reset	BACnetDatetime	-	O	-
Elapsed_Active_Time	Unsigned	-	O	-
Time_Of_Active_Time_Reset	BACnetDatetime	-	O	-
Minimum_Off_Time	Unsigned32	-	O	-
Minimum_On_Time	Unsigned32	-	O	-
Priority_Array	BACnetPriorityArray	BACnetPriorityArray	R	-
Relinquish_Default	BACnetBinaryPV	INACTIVE (0)	R	-

Notify_Type	BACnetNotifyType	-	O	-
Event_Time_Stamps	BACnetArray[N] of BACnetTimeStamp	-	O	-
Profile_Name	CharacterString	-	O	-

4.4.3.30. VirtualTemperatureActive (Binary Input Object Type)

It indicates if the virtual temperature function is active or not. For more information on this function, see [Considerations on BACnet Temperature Objects \(page 54\)](#).

Property Identifier	Property Datatype	Value	ASHRAE	Gateway
Object_Identifier	BACnetObjectIdentifier	(Binary Input, 14)	R	R
Object_Name	CharacterString	VirtualTempActive	R	R
Object_Type	BACnetObjectType	BINARY_INPUT (3)	R	R
Present_Value	BACnetBinaryPV	INACTIVE (0) / ACTIVE (1)	R	R
Description	CharacterString	-	O	-
Device_Type	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0) UNRELIABLE_OTHER (7)	O	R
Out_Of_Service	BOOLEAN	FALSE	R	R
Polarity	BACnetPolarity	NORMAL (0)	R	R
Inactive_Text	CharacterString	No	O	R
Active_Text	CharacterString	Yes	O	R
Change_Of_State_Time	BACnetDatetime	-	O	-
Change_Of_State_Count	Unsigned	-	O	-
Time_Of_State_Count_Reset	BACnetDatetime	-	O	-
Elapsed_Active_Time	Unsigned	-	O	-
Time_Of_Active_Time_Reset	BACnetDatetime	-	O	-
Time_Delay	Unsigned	-	O	-
Notification_Class	Unsigned	-	O	-
Alarm_Value	BACnetBinaryPV	-	O	-
Event_Enable	BACnetEventTransitionBits	-	O	-
Acked_Transitions	BACnetEventTransitionBits	-	O	-
Notify_Type	BACnetNotifyType	-	O	-
Event_Time_Stamps	BACnetArray[N] of BACnetTimeStamp	-	O	-
Profile_Name	CharacterString	-	O	-

4.4.3.31. EcoMode_status (Multistate Input Object Type)

It indicates the status of the EcoMode function

Property Identifier	Property Datatype	Value	ASHRAE	IBOX
Object_Identifier	BACnetObjectIdentifier	(Multistate Input, 5)	R	R
Object_Name	CharacterString	EcoMode_status	R	R
Object_Type	BACnetObjectType	MULTISTATE_INPUT (13)	R	R
Present_Value	Unsigned	1 ~ 2	R	R
Description	CharacterString	-	O	-
Device_Type	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE/TRUE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0), UNRELIABLE_OTHER(7)	O	R
Out_Of_Service	BOOLEAN	FALSE	R	R
Number_Of_States	Unsigned	2	R	R
State_Text	BACnetArray[N] of CharacterString	Check the EcoMode status table below.	O	R
Time_Delay	Unsigned	-	O	-
Notification_Class	Unsigned	-	O	-
Alarm_Values	List of Unsigned	-	O	-
Fault_Values	List of Unsigned	-	O	-
Event_Enable	BACnetEventTransitionBits	-	O	-
Acked_Transitions	BACnetEventTransitionBits	-	O	-
Notify_Type	BACnetNotifyType	-	O	-
Event_Time_Stamps	BACnetArray[N] of BACnetTimeStamp	-	O	-
Profile_Name	CharacterString	-	O	-

EcoMode interpretation is possible using the value in the following correspondence table:

Table 11. EcoMode Status Table

Present_Value	State_Text
1	Off
2	On

4.4.3.32. EcoMode_command (Multistate Output Object Type)

It allows control over the EcoMode.

Property Identifier	Property Datatype	Value	ASHRAE	IBOX
Object_Identifier	BACnetObjectIdentifier	(Multistate Output,0)	R	R
Object_Name	CharacterString	EcoMode_command	R	R
Object_Type	BACnetObjectType	MULTISTATE_OUTPUT (14)	R	R
Present_Value	Unsigned	1 ~ 2	W	W
Description	CharacterString	-	O	-
Device_Type	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0)	O	R
Out_Of_Service	BOOLEAN	FALSE	R	R
Number_Of_States	Unsigned	2	R	R
State_Text	BACnetArray[N] of CharacterString	Check the EcoMode Command table below	O	R
Priority_Array	BACnetPriorityArray	-	R	R
Relinquish_Default	Unsigned	-	R	R
Time_Delay	Unsigned	-	O	-
Notification_Class	Unsigned	-	O	-
Feedback_Value	Unsigned	-	O	-
Event_Enable	BACnetEventTransitionBits	-	O	-
Acked_Transitions	BACnetEventTransitionBits	-	O	-
Notify_Type	BACnetNotifyType	-	O	-
Event_Time_Stamps	BACnetArray[N] of BACnetTimeStamp	-	O	-
Profile_Name	CharacterString	-	O	-

EcoMode interpretation is possible using the value in the following correspondence table:

Table 12. EcoMode Command Table.

Present_Value	State_Text
1	Off
2	On

4.4.3.33. RemoteControllerProhibit_status (Multistate Input Object Type)

It indicates the remote controller prohibit status.

Property Identifier	Property Datatype	Value	ASHRAE	Gateway
Object_Identifier	BACnetObjectIdentifier	(Multistate Input, 6)	R	R
Object_Name	CharacterString	RemoteControllerProhibit_status	R	R
Object_Type	BACnetObjectType	MULTISTATE_INPUT (13)	R	R
Present_Value	Unsigned	1 .. 2	R	R
Description	CharacterString	-	O	-
Device_Type	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE/TRUE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0), UNRELIABLE_OTHER (7)	O	R
Out_Of_Service	BOOLEAN	FALSE/TRUE	R	R
Number_Of_States	Unsigned	2	R	R
State_Text	BACnetArray[N] of CharacterString	Check the Remote Controller Prohibit Status table below.	O	R
Time_Delay	Unsigned	-	O	-
Notification_Class	Unsigned	-	O	-
Alarm_Values	List of Unsigned	-	O	-
Fault_Values	List of Unsigned	-	O	-
Event_Enable	BACnetEventTransitionBits	-	O	-
Acked_Transitions	BACnetEventTransitionBits	-	O	-
Notify_Type	BACnetNotifyType	-	O	-
Event_Time_Stamps	BACnetArray[N] of BACnetTimeStamp	-	O	-
Profile_Name	CharacterString	-	O	-

Table 13. RemoteControllerProhibit_Status

Present_Value	State_Text
1	Unlocked
2	Locked

4.4.3.34. RemoteControllerProhibit_command (Multistate Output Object Type)

It allows control over the indoor unit's Remote Controller.

Property Identifier	Property Datatype	Value	ASHRAE	Gateway
Object_Identifier	BACnetObjectIdentifier	(Multistate Output,5)	R	R
Object_Name	CharacterString	RemoteControllerProhibit_command	R	R
Object_Type	BACnetObjectType	MULTISTATE_OUTPUT (14)	R	R
Present_Value	Unsigned	1 .. 2	W	W
Description	CharacterString	-	O	-
Device_Type	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0) UNRELIABLE_OTHER (7)	O	R
Out_Of_Service	BOOLEAN	FALSE	R	R

Profile_Name	CharacterString	-	O	-

Table 14. RemoteControllerProhibit_Command

Present_Value	State_Text
1	Unlocked
2	Locked

4.4.3.35. DIP_SW_S1_status (Analog Input Object Type)

It indicates the status of the DIP switch block SW1 in decimal value. To get the status of each individual switch of SW1, just convert it to binary. The gateway reads this value only when booting up.

Property Identifier	Property Datatype	Value	ASHRAE	Gateway
Object_Identifier	BACnetObjectIdentifier	(Analog Input, 9)	R	R
Object_Name	CharacterString	DIP_SW_S1_status	R	R
Object_Type	BACnetObjectType	ANALOG_INPUT (0)	R	R
Present_Value	BACnetBinaryPV	0 .. 255	R	R
Description	CharacterString	-	O	-
Device_Type	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0)	O	R

Profile_Name	CharacterString	-	O	-
Units	BACnetEngineeringUnits	No units (95)	R	R
COV_Increment	REAL	0	O	W

4.4.3.36. DIP_SW_S2_status (Analog Input Object Type)

It indicates the status of the DIP switch block SW2 in decimal value. To get the status of each individual switch of SW2, just convert it to binary. The gateway reads this value only when booting up.s

Property Identifier	Property Datatype	Value	ASHRAE	Gateway
Object_Identifier	BACnetObjectIdentifier	(Analog Input, 10)	R	R
Object_Name	CharacterString	DIP_SW_S2_status	R	R
Object_Type	BACnetObjectType	ANALOG_INPUT (0)	R	R
Present_Value	BACnetBinaryPV	0 .. 255	R	R
Description	CharacterString	-	O	-
Device_Type	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0)	O	R
Out_Of_Service	BOOLEAN	FALSE / TRUE	R	R
Change_Of_State_Time	BACnetDatetime	-	O	-
Change_Of_State_Count	Unsigned	-	O	-
Time_Of_State_Count_Reset	BACnetDatetime	-	O	-
Elapsed_Active_Time	Unsigned	-	O	-
Time_Of_Active_Time_Reset	BACnetDatetime	-	O	-
Time_Delay	Unsigned	-	O	-
Notification_Class	Unsigned	-	O	-
Alarm_Value	BACnetBinaryPV	-	O	-

Profile_Name	CharacterString	-	O	-
Units	BACnetEngineeringUnits	No units (95)	R	R
COV_Increment	REAL	0	O	W

4.4.3.37. SerialNumber (Analog Input Object Type)

It indicates the gateway's serial number: **000EXXXXX**

- 000E is a constant value and it's not included in the Present_Value property.
- XXXXX is a unique value for each gateway. This is the information the Present_Value provides.

Property Identifier	Property Datatype	Value	ASHRAE	Gateway
Object_Identifier	BACnetObjectIdentifier	(Analog Input, 11)	R	R
Object_Name	CharacterString	SerialNumber	R	R
Object_Type	BACnetObjectType	ANALOG_INPUT (0)	R	R
Present_Value	REAL	00000 .. 99999	R	R
Description	CharacterString	-	O	-
Device_Type	CharacterString	-	O	-
Status_Flags	BACnetStatusFlags	{FALSE, FALSE/TRUE, FALSE, FALSE}	R	R
Event_State	BACnetEventState	STATE_NORMAL (0)	R	R
Reliability	BACnetReliability	NO_FAULT_DETECTED (0)	O	R
Out_Of_Service	BOOLEAN	FALSE	R	R
Polarity	BACnetPolarity	NORMAL (0)	R	R
Inactive_Text	CharacterString	-	O	R
Active_Text	CharacterString	-	O	R
Change_Of_State_Time	BACnetDatetime	-	O	-
Change_Of_State_Count	Unsigned	-	O	-
Time_Of_State_Count_Reset	BACnetDatetime	-	O	-
Elapsed_Active_Time	Unsigned	-	O	-

Alarm_Value	BACnetBinaryPV	-	O	-
Event_Enable	BACnetEventTransitionBits	-	O	-
Acked_Transitions	BACnetEventTransitionBits	-	O	-
Notify_Type	BACnetNotifyType	-	O	-
Event_Time_Stamps	BACnetArray[N] of BACnetTimeStamp	-	O	-
Profile_Name	CharacterString	-	O	-
Units	BACnetEngineeringUnits	No units (95)	R	R
COV_Increment	REAL	0	O	W

4.5. Considerations on BACnet Temperature Objects

- **Setpoint_command (Analog Output Object Type)**

This is the temperature setpoint requested by the user. This value can be read and written. A remote controller connected to the indoor unit will report the same temperature setpoint value as set in this object. This will apply when no AC unit external reference temperature is provided from the gateway (see details below).

- **RoomTemperature_status (Analog Input Object Type)**

This object reports the temperature that is currently used by the indoor unit as the reference of its own control loop. Depending on the indoor unit configuration, this value can be the temperature reported by the sensor on the return path of the indoor unit or the sensor on its remote controller. Present value can be read-only.

NOTE

Fujitsu cannot guarantee the Room Temperature object value is consistently equal to the current actual room temperature.

- **RoomTemperature_command (Analog Output Object Type)**

This object is used to provide an external temperature sensor reading from the BACnet side. When the indoor unit does not allow external devices to provide a reference temperature for the control loop directly, the gateway applies the following mechanism called "Virtual Temperature":

- **Virtual Temperature**

Upon receipt of RoomTemperature_command and Setpoint_command, the gateway estimates an appropriate setpoint correction to be applied.

TIP

EXAMPLE: If Setpoint_command = 22°C and RoomTemperature_command = 20°C are received, the gateway will assume that the user is demanding a +2°C increase in temperature.

By knowing the reference temperature currently used by the indoor unit, the gateway can calculate the required temperature setpoint correction needed to reach the desired temperature.

TIP

In the example given above, if the gateway reads a RoomTemperature_command of 22°C in the indoor unit, it will apply a final setpoint of **22°C + 2°C = 24°C**.

Every time the gateway detects a change in room temperature reported by the indoor unit, it will adjust the setpoint accordingly.

TIP

Following the example, if the gateway receives a new temperature value from the indoor unit of 25°C, it will adjust the setpoint to **25°C + 2°C = 27°C**.

NOTE

The gateway applies the "Virtual Temperature" formula:

$$S_{Ac} = S_{BMS} - (T_{BMS} - T_{AC})$$

Where:

S_{AC}: AC setpoint. Temperature setpoint in the AC system.

S_{BMS}: BMS setpoint. Temperature setpoint set by the user from the BMS protocol.

T_{BMS}: BMS temperature. Ambient temperature set by the user from the BMS protocol.

T_{AC}: AC temperature. Ambient temperature in the AC system (also known as AC reference temperature).

When the gateway detects a change in any S_{BMS} , T_{BMS} , or T_{AC} values, it will apply this formula and send the new setpoint (S_{AC}) to the indoor unit.

After a device booting, the present value for RoomTemperature_command has a value of 0, and the property “Reliability” becomes *Unreliable Other* (7). This “Reliability” status means that no external temperature reference has been provided to the object, so the system is not applying the Virtual temperature function. However, after receiving the first value, “Reliability” will change into *Nofault Detected* (0). After that, any value can be used in the temperature range, including 0.

- **Setpoint_status (Analog Input Object Type)**

This object will show the real temperature sent to the indoor unit. Its behavior depends on the *virtual temperature* function:

- If *virtual temperature* is not in use, its value will be the same that Setpoint_command.
- If *virtual temperature* is being used, the value will be the real setpoint modified by this function algorithm, as explained above.

NOTE

You can set the temperature scale in Celsius or Fahrenheit scale via DIP switches. More information in [DIP switches \(page 68\)](#).

4.6. Occupancy

IMPORTANT

This function requires an external sensor on the control system (BMS) side to detect if there's someone in the room.

The occupancy function determines the AC unit behavior depending on the presence or absence of people in the room. This signal is processed directly in the Intesis gateway and modifies three parameters from the AC system: Setpoint, Mode, and On/Off.

To adjust the settings for the current mode (Heat or Cool), the gateway offers six different BACnet objects:

- OccupiedCoolSetPoint
- OccupiedHeatSetPoint
- UnoccupiedCoolSetPoint
- UnoccupiedHeatSetPoint
- OccupancyContinousCheck
- UnoccupiedDeadbandAction

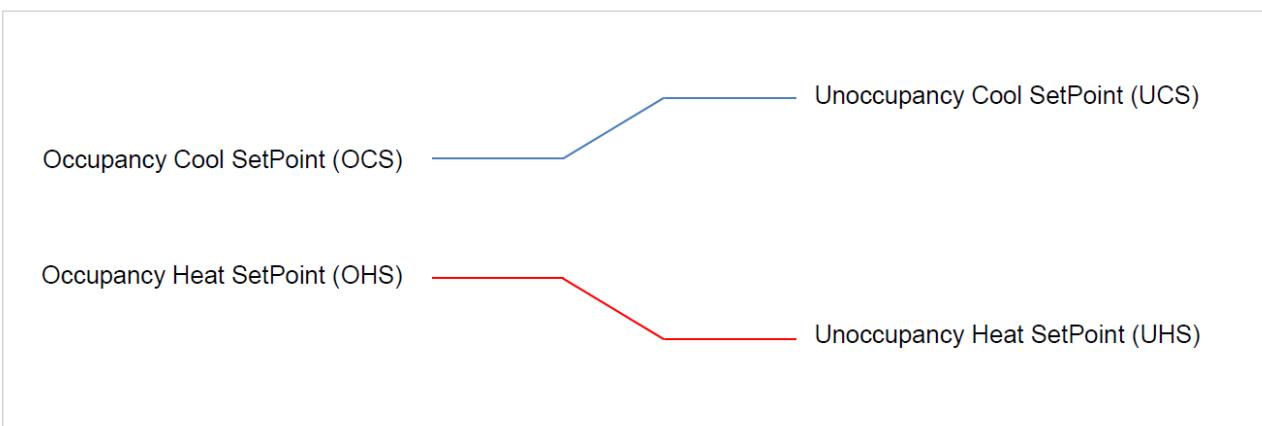

Figure 1. Temperature setpoint settings

**NOTICE**

The minimum difference between Cool and Heat setpoints must be 2°C / 4°F.

Occupancy/Unoccupancy Cool SetPoint (OCS/UCS): This is the default value for the setpoint temperature when the current mode is Cool, and Occupancy / Unoccupancy is enabled. UCS must always be greater or equal to OCS. The difference between OCS and OHS must be greater or equal to 2°C / 4°F).

Occupancy/Unoccupancy Heat SetPoint (OHS/UHS): This is the default value for the setpoint temperature when the current mode is Heat, and Occupancy / Unoccupancy is enabled. UHS must always be smaller or equal to OHS. The difference between OCS and OHS must be greater or equal to 2°C / 4°F.

Occupancy Continous check: It determines when the gateway checks the occupancy:

- If the parameter is checked, the gateway checks the occupancy when there's any change in the room's temperature.
- If the parameter is unchecked, it only checks the occupancy when the occupancy status changes.

Unoccupied Deadband Action: This determines the AC unit behavior while the ambient temperature is in between the deadband. If unchecked, the indoor unit will turn off; if checked, it will remain on.

When **Occupancy mode** is active (there is presence in the room), according to current room temperature, **mode**, **setpoint**, and **on/off** will be set to:

Condition	Setpoint	Mode	On/Off
Room temperature > OCS	Current OCS value	Cool	On
Room temperature < OHS	Current OCS value	Heat	On
OCS < Room temperature > OHS	OCS/OHS depending on the current mode (If Fan or Dry mode is active, no setpoint is sent)	Current mode	On

When **Unoccupancy mode** is active (there is no presence in the room), according to current room temperature, **mode**, **setpoint** and **on/off** will be set to:

Condition	Setpoint	Mode	On/Off
Room temperature > OCS	Current UCS value	Cool	On
Room temperature < OHS	Current UHS value	Heat	On
OCS < Room temperature > OHS	UCS/UHS depending on the current mode (If Fan or Dry mode is active, no setpoint is sent)	Current mode	On (Deadband action=1)
			Off (Deadband action=0)

The room temperature is cross-checked against temperature settings as described above when:

- The AC indoor unit occupancy status changes.
- The room temperature changes (only if the **check continuously** function is enabled).

**NOTICE**

Any local change (for example with the remote control) in the Setpoint, Mode, or the On/Off signal will disable the Occupancy functionality.

5. Modbus Application Specifications

The following sections provide the gateway's specifications when set as a Modbus RTU server device.

5.1. Implemented Modbus Functions

The IN485FGL001I000 gateway implements the following standard Modbus functions:

- 03: Read Holding Registers
- 04: Read Input Registers
- 06: Write Single Register
- 16: Write Multiple Registers

IMPORTANT

Even though function 16 is available, the gateway does not allow writing operations on more than one register with the same request, so the length field when using this function should always be one.

5.2. Modbus Physical Layer

The IN485FGL001I000 gateway implements a Modbus RTU (server) interface to be connected to an EIA-485 bus. It features an 8-N-2 communication (eight data bits, no parity, and two stop bits) with several available baud rates: 2400, 4800, **9600 -default-**, 19200, 38400, 57600, 76800, and 115200 bps. It also supports 8-N-1 communication (eight data bits, no parity, and one stop bit).

5.3. Modbus Registers

Register name	Possible values	Register protocol address	Register PLC address	R/W
AC unit On/Off	0: Off 1: On	0	1	R/W
AC unit Mode ¹	0: Auto 1: Heat 2: Dry 3: Fan 4: Cool	1	2	R/W
AC unit Fan speed mode ^{1,2}	0: Auto 1: Quiet 2: Low 3: Med 4: High	2	3	R/W
AC unit Vane position ¹	1: Position-1 (Horizontal) 2: Position-2 (Horizontal) 3: Position-3 (Medium) 4: Position-4 (Vertical) 10: Swing	3	4	R/W

Register name	Possible values	Register protocol address	Register PLC address	R/W
Temperature (user) setpoint ^{1,3}	-32768 (Initialization value) 16 .. 30 (°C) (0 = undetermined) 61 .. 86 (°F) (0 = undetermined) More info in Considerations on Modbus Temperature Registers (page 63) Considerations on Modbus Temperature Registers (page 63)	4	5	R/W
AC unit Reference temperature ³	The values range is specific to the manufacturer	5	6	R
Window contact	0: Closed (default) 1: Open	6	7	R/W
Control objects disablement. It disables the control of the AC unit through the registers of the gateway	0: Control objects enabled (default) 1: Control objects disabled  TIP Send a 0 to this register if, for any reason, the gateway doesn't work.	7	8	R/W
AC remote control disablement. It disables the control of the AC unit through any RC	0: Remote control enabled (default) 1: Remote control disabled More info in Considerations on Modbus Temperature Registers (page 63) Considerations on Modbus Temperature Registers (page 63)	8	9	R/W
AC unit Operation time (in hours). It counts the time the AC unit is on	0 .. 65535	9	10	R/W
AC unit Alarm status	0: No alarm condition 1: Alarm condition	10	11	R
Error code	0: No error present 65535 (-1 if it is read as a signed value): Communication error between the gateway or the remote controller and the AC unit For any other value, see Error Codes (page 74) Error Codes (page 74)	11	12	R
Open window timeout (in minutes)	0 .. 30	13	14	R/W
Baudrate currently selected via DIP switch SW2	2400 bps 4800 bps 9600 bps 19200 bps 38400 bps 57600 bps 76800 bps 115200 bps	14	15	R
Modbus slave address	1 .. 63	15	16	R
Number of fan speeds	3 .. 6	21	22	R
Input sensor temperature ^{1,3} The indoor unit's ambient temperature is provided by an external sensor (on the Modbus side)	-32768: (Initialization value). No temperature is provided by an external sensor Any other value: (NºC / NºCx10 / NºF)	22	23	R/W
AC real temperature setpoint ^{1,3} When no external temperature is provided, this read-only register will show the same value as register 5 (PLC addressing). In all cases, it will show the current setpoint in the indoor unit	16 .. 31°C / 60 .. 92°F	23	24	R

Register name	Possible values	Register protocol address	Register PLC address	R/W
Current AC max setpoint ¹³	-32768 (Initialization value) The values range is specific to the manufacturer	24	25	R
Current AC min setpoint ¹³	-32768 (Initialization value) The values range is specific to the manufacturer	25	26	R
AC unit Horizontal vane position	0: Auto (default) 1: Position 1 ... 5: Position 5 10: Swing	26	27	R/W
Window status (feedback)	0: Not active (default) 1: Active (the window is open)	31	32	R
External On/Off disablement	0: Not active (default) 1: Active	36	37	R/W
Window contact On/Off disablement	0: Window contact is not disabling On/Off (it is not working) 1: Window contact is disabling On/Off (it is in use)	40	41	R
Filter reset:	1: Reset	43	44	W
Filter status	0: Off 1: On	44	45	R
DIP switches current value	DIP switches current value	48	49	R
Antifreeze operation	0: Disabled 1: Enabled	56	57	R/W
Economy operation	0: Disabled 1: Enabled	64	65	R/W
Input reference temperature ¹³	0x8000: No temperature is provided by an external sensor. No virtual temperature is being applied Any other value: (NºC / NºCx10 / NºF)	65	66	R
Return path temperature ¹³	-32768 (Initialization value) The values range is specific to the manufacturer	66	67	R
Firmware version MSB.	It shows the first two numbers of the firmware version. Example: For version 1.2.3.4, it will show 1.2 (in hexadecimal)	94	95	R
Firmware version LSB.	It shows the last two numbers of the firmware version. Example: For version 1.2.3.4, it will show 3.4 (in hexadecimal)	95	96	R
Modbus Reset	1: Reset	99	100	W
Virtual temperature active	0: No active 1: Active	129	130	R
Window contact step. It indicates the current window contact state:	0: Idle (window is closed) 1: Timeout1 (window is opened, timeout starts) 2: Timeout2 (it doesn't apply to window contact) 3: Window contact applies (window is opened, time is finished, window contact action is applied)	130	131	R
Window contact reload last value	0: No (default) 1: Yes	1000	1001	R/W
Window contact lock when open	0: No 1: Yes	1001	1002	R/W
Window timeout (in minutes)	0 .. 30	1002	1003	R/W
Machine mode	0: Normal (default) 1: Autochangeover 2: Limited setpoint	1150	1151	R/W
Machine min. setpoint cool	By default: 24ºC	1153	1154	R/W
Machine max. setpoint cool	By default: 24ºC	1154	1155	R/W

Register name	Possible values	Register protocol address	Register PLC address	R/W
Machine min. setpoint heat	By default: 28°C	1155	1156	R/W
Machine max. setpoint heat	By default: 19°C	1156	1157	R/W
Poll timeout (in milliseconds)	By default: 5000 ms	1160	1161	R/W
Remote lock after reset	0: Remote lock is disabled after reset 1: It keeps the value set in register 8 (AC remote control disablement)	1220	1221	W

5.4. Considerations on Modbus Temperature Registers

- **AC unit Temperature Setpoint (R/W) (register 5 – in PLC addressing)**

This is the adjustable temperature setpoint meant to be required by the user. This register can be read (Modbus functions 3 or 4) or written (Modbus functions 5 or 16). A remote controller connected to the three-wire bus of the AC indoor unit will report the same temperature setpoint value as this register.

- **AC unit external reference temperature (R/W) (register 23 – in PLC addressing)**

This register allows for providing an external temperature reference from the Modbus side. If an external temperature is provided through this register, the indoor unit will use it as the reference for its temperature control loop.

NOTE

The Fujitsu RAC / domestic line split units need an additional communication accessory to enable communication with the gateway and to make this register have an effect.

- For this temperature to take effect, configure the Fujitsu AC indoor unit to use the “thermostat sensor in the remote controller” (this is, the gateway will act as a thermostat sensor providing a temperature sensor reading).

IMPORTANT

Only Fujitsu authorized installers during the installation of the AC unit are allowed to perform this configuration using a remote controller connected to the unit.

- The register value after the gateway startup is -32768, which means that no temperature reference is provided to the AC indoor unit. In that case, the AC indoor unit will use its own return path temperature sensor as the reference for its control loop.

- **Virtual Temperature**

Once the first temperature value is received on the **AC unit external reference temperature** register (23 in PLC addressing), the gateway will activate this function, applying the following formula to estimate the appropriate setpoint correction for the indoor unit:

$$S_{AC} = S_{BMS} - (T_{BMS} - T_{AC})$$

Where:

S_{AC} : AC setpoint. Temperature setpoint in the AC system.

S_{BMS} : BMS setpoint. Temperature setpoint set by the user from the BMS protocol.

T_{BMS} : BMS temperature. Ambient temperature set by the user from the BMS protocol.

T_{AC} : AC temperature. Ambient temperature in the AC system (also known as AC reference temperature).

When the gateway detects a change in any S_{BMS} , T_{BMS} , or T_{AC} values, it will apply this formula and send the new setpoint (S_{AC}) to the indoor unit.

Moreover, notice that the temperature values of these four registers are expressed according to the temperature format configured through the gateway's DIP switches. The following formats are possible:

- **Celsius:** the temperature value is in Celsius (a value “22” in the Modbus register must be interpreted as 22°C).
- **Tenths of value:** the temperature value is Nx10 (a value “220” in the Modbus register must be interpreted as 22.0°C).
- **Fahrenheit:** the temperature value is in Fahrenheit (a value “72” in the Modbus register must be interpreted as 72°F).

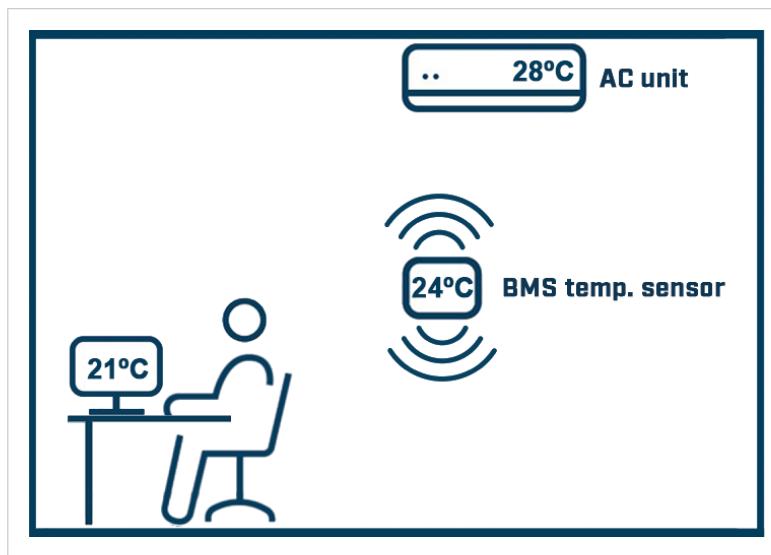

6. Virtual Temperature

Some conditions may create a difference between the real temperature at which an AC unit operates and the temperature perceived by the temperature sensor and the people in the room. For these cases, the gateway incorporates the virtual temperature function, which applies a formula to establish the real desired temperature.

For example, imagine a room where:

- The AC unit operates at 28°C.
- The control system sensor perceives a temperature of 24°C.

The user decides to lower the temperature and sets it at 21°C.

Without the virtual temperature function, the AC unit lowers the temperature by 7°C to match the 21°C the user desires (28-7), but what the user actually gets is 17°C (24-7).

The virtual temperature function applies a formula to make the AC unit operate at the appropriate temperature:

$$S_{AC} = T_{AC} - (T_{BMS} - S_{BMS})$$

Where:

S_{AC} : AC setpoint: Setpoint temperature in the AC system.

S_{BMS} : BMS setpoint: Setpoint temperature set by the user from the BMS protocol.

T_{AC} : AC temperature: Ambient temperature in the AC system (AC reference temperature).

T_{BMS} : BMS temperature: Ambient temperature set by the user from the BMS protocol.

Activating the virtual temperature function, the AC unit does not lower the temperature by 7°C, but only 3°C. This way, it operates at 25°C, and both the sensor and the user perceive the desired temperature of 21°C.

IMPORTANT

Once the virtual temperature is active, it's no longer possible to write the setpoint temperature from the HVAC side, neither through the remote controller, the AC unit, or any other device.

**NOTE**

The virtual temperature function is very useful in some situations, but not desirable in others.

You may use it when:

- The temperature the AC unit provides differs from the temperature perceived in the room.
- There are no temperature sensors in the room.
- There are temperature sensors, but it is not possible to configure the temperature they measure as the AC unit reference temperature.

7. Connections and Switches

7.1. Connection Procedure

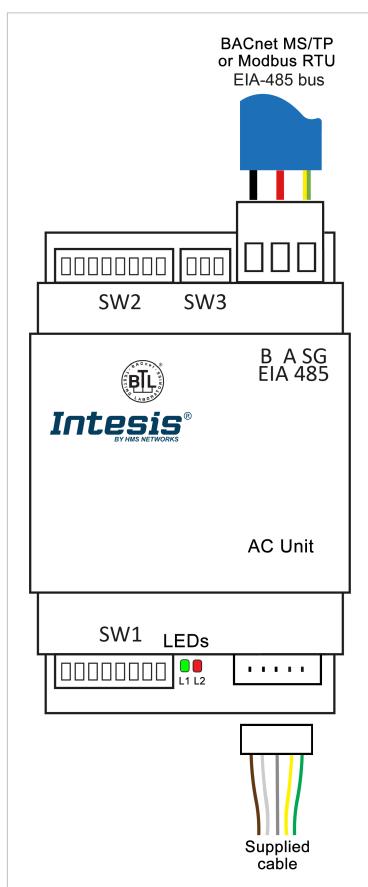

CAUTION

Disconnect all systems from the power source before connecting them to the gateway.

IMPORTANT

Keep communication cables away from power and ground wires.

Connection to the AC indoor unit

1. Mount the gateway in the desired place.
2. Use the supplied cable to connect the AC unit and the gateway:

IMPORTANT

This cable is 1.50 m (4.9 feet) long. Its modification in length may affect the correct operation of the gateway.

- a. **AC unit connection:** Plug the largest unsheathed cable part connector into the socket CN75, CN65, CN12 or CN6 of the AC unit control board.
- b. **Gateway connection:** Plug the other end connector, the one on the shortest unsheathed part of the cable, into the socket labeled as **AC Unit**.

Connection to the BACnet MS/TP or Modbus RTU bus

3. Connect the BACnet MS/TP or Modbus RTU bus to the EIA-485 port of the gateway.

IMPORTANT

Observe polarity: B-, A+, and SG for signal ground.

IMPORTANT

- EIA-485 bus doesn't allow loop or star topologies.
- Maximum length for the EIA-485 bus is 1200 meters.

4. Reconnect all systems to their power source.

Figure 2. Wiring diagram (wire colors are indicative only. The AC unit cable may have four or five poles)

7.2. DIP switches

The gateway includes three built-in DIP switches: SW1 (8 positions) at the bottom side; SW2 (8 positions) and SW3 (3 positions) at the top side.

Table 21. DIP switch SW1: (P1, P4): AC unit configuration; (P5): Gateway configuration; (P6 to P8): BACnet MS/TP or Modbus RTU baudrate

Binary value	Position								Description	
	1	2	3	4	5	6	7	8	BACnet	Modbus

XXXXXXX1	X	X	X	X	X	X	X	↑	-	Temperature in Fahrenheit

Table 24. DIP switch SW3: (P1 to P3): BACnet/Modbus polarization and termination resistor

Binary value	Position			Description
	1	2	3	
0 XX	↓	X	X	EIA-485 bus without termination resistor. The gateway is not at one end of the EIA-485 bus (default value)
1 XX	↑	X	X	120 Ω termination resistor active. The gateway is at one end of the EIA-485 bus
X 0 0	X	↓	↓	No bus polarization (default value)
X 1 1	X	↑	↑	Bus polarization active

IMPORTANT

The DIP switches configuration will only take effect after rebooting the gateway.

8. Setup Process

8.1. Prerequisites

For this integration, you need the following:

1. An active BACnet MS/TP or Modbus RTU client device must be present and well-connected to the EIA 485 port of the gateway.
2. The items supplied by HMS Networks:
 - The Intesis IN485FGL001I000 gateway
 - The supplied cable to connect the gateway and the AC indoor unit
 - The installation sheet

8.2. Physical Connections Checking

To ensure the gateway is working correctly:

1. Check the connection between the AC unit and the gateway.
2. Make sure the AC unit is connected to the power supply.
3. Check the EIA-485 port connection on the gateway, and verify polarity and termination resistor settings.

8.3. LED Status

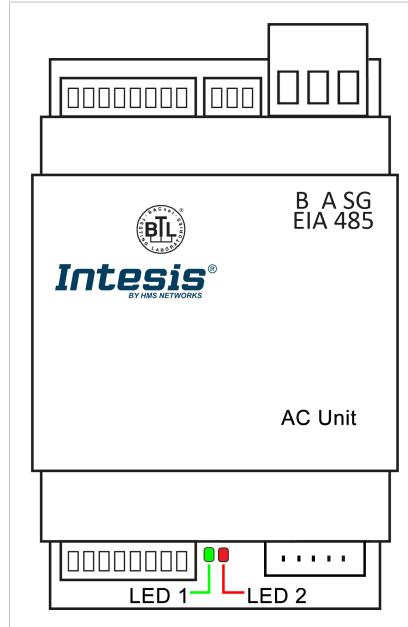

Figure 3. IN485FGL001I000 LEDs

When powering the gateway up, both LED indicators blink once and then turn off. After that, LEDs will behave as described in the table below:

LED	Status	Description
When the gateway is set for BACnet MS/TP		
L1 Green	ON	EIA-485 bus link performed
	Flickering	Activity on the EIA/485 bus
	OFF	EIA-485 bus link not performed
L2 Red	ON	AC communication error
	Blinking	AC unit error
	Flashing	AC communication OK
When the gateway is set for Modbus RTU		
L1 Green	Blinking	Communication error Any error in the AC unit
	Flashing	Normal operation
L1 Green + L2 Red	Pulse	Gateway startup

LED PATTERNS

- **ON:** 100% on
- **Flickering:** irregular cycle (90% on - 10% off approx)
- **Blinking:** 50% on - 50% off
- **Flashing:** 10% on - 90% off
- **OFF:** 100% off
- **Pulse:** 5 sec on - then off

9. Restore the Factory Settings

To restore the gateway's factory settings, proceed as follows:

1. Set all switches from DIP switches SW1 and SW2 to the ON position.
2. Reboot the gateway:
 - a. Power it OFF.
 - b. Power it ON.

**NOTE**

To turn the gateway OFF, disconnect it from the AC unit and from the power supply, if there is one. To turn the gateway ON, reestablish those connections.

3. After the reboot, LEDs will blink with the SOS Morse sequence:
 - a. Three short blinks
 - b. Three longer blinks
 - c. Three short blinks
4. Set all switches from DIP switches SW1 and SW2 DIP to the OFF position before 30 seconds pass.¹

After this procedure, the LED will flash red, meaning that the gateway is already restored to the factory settings.

To continue working with the gateway, proceed as usual:

1. Set the DIP switches again depending on the desired configuration.
2. Reset the device:
 - a. Power it OFF.
 - b. Power it ON.

**IMPORTANT**

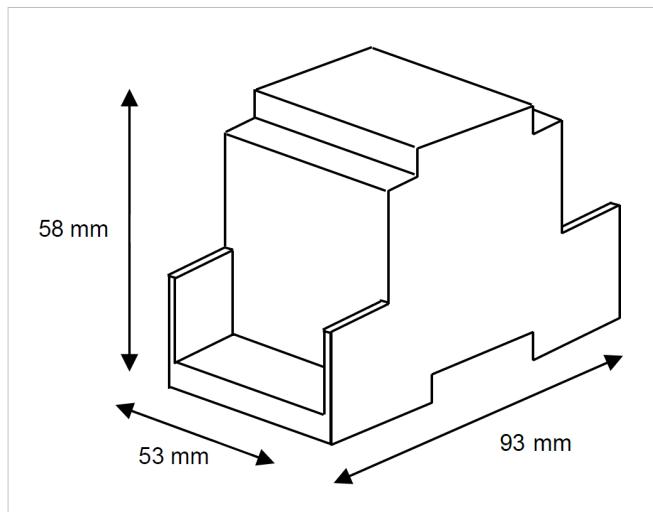

¹ If you take longer than 30 seconds, all LEDs will turn off, meaning that the procedure has failed. To retry it, begin the whole procedure again.

10. Hardware Specifications

10.1. Technical Specifications

Housing	Plastic, type PC (UL 94 V-0) Net dimensions (DxWxH): 93 x 53 x 58 mm / 3.7 x 2.1 x 2.3" Recommended space for installation (DxWxH): 100 x 60 x 70 mm / 4 x 2.4 x 2.8" Color: Light grey, RAL 7035
Weight	85 g (3 oz)
Terminal wiring for low-voltage signals	Per terminal: solid wires or stranded wires (twisted or with ferrule). Wire cross-section/gauge: One core: 0.2 to 2.5 mm ² (24 to 11 AWG) Two cores: 0.2 to 1.5mm ² (24 to 15 AWG) Three cores: Not permitted
Mounting	Wall or DIN rail
BACnet MS/TP - Modbus RTU port	1 x EIA-485 pluggable terminal block (3 poles: B, A, and SG) with 120 Ω resistor termination and polarisation configurable by DIP switch
AC unit port	1 x Specific socket
LED indicators	2 x Communication status
DIP switches	SW1: Gateway, AC unit, and baudrate configuration SW2: BACnet/Modbus address and temperature unit SW3: Bus polarization and termination
Operational and storage temperature	Celsius: Op: 0 to +70°C; St: -20 to 85°C Fahrenheit: 32 to 158°F; St: -4 to 185°F
Operational and storage humidity	5% to 95%, non-condensing
Isolation Voltage	1500 VDC
Isolation resistance	1000 MΩ

10.2. Dimensions

11. Error Codes

NOTE

- These error codes are the same for BACnet and Modbus.
- Since the error codes for the ErrorCodeM BACnet object are the same as those for the RC, they are not listed.

11.1. Gateway Error Codes

Error code	Error code in the RC	Error description
0	N/A	No active error
65535 (-1)	N/A	Communication error between the gateway or the remote controller and the AC unit

11.2. RAC and VRF J-II/V-II/VR-II Series Error Codes

Error code	Error in the RC	System	Error description
0	0	RAC Inverter and Non-inverter	Wired remote controller error
1	1		Indoor signal error
2	2		Indoor room temperature sensor error
3	3		Indoor room temperature sensor error
4	4		Indoor heat exchanger temperature sensor (middle) error
5	5		Indoor heat exchanger temperature sensor (middle) error
6	6		Outdoor heat exchanger temperature sensor (outlet) error
7	7		Outdoor heat exchanger temperature sensor (outlet) error
8	8		Power voltage error
9	9		Float switch operated
10	0A		Outdoor temperature sensor error
11	0b		Outdoor temperature sensor error
12	0C		Outdoor discharge pipe temperature sensor error
13	0d		Outdoor discharge pipe temperature sensor error
14	0E		Heat sink thermistor (Inverter) error
15	0F		Discharge temperature error
17	11		Indoor unit EEPROM error
18	12		Indoor fan error
19	13		Indoor signal error
20	14		Outdoor EEPROM error
21	15		Compressor temperature sensor error
22	16		Pressure switch abnormal, Pressure sensor error
23	17		IPM protection
24	18		CT error
25	19		Active filter error
26	1A		INV voltage protection
27	1b		Compressor location error
28	1C		Outdoor fan error
29	1d		Outdoor unit computer communication error
30	1E		2-way valve temperature sensor error
			3-way valve temperature sensor error

31	1F		Connected indoor unit error
32	20		Indoor MANUAL/AUTO switch error
33	21		reverse VDD permanent stop protection
34	22		VDD permanent stop protection
36	24		Excessive high pressure protection on cooling
37	25		P.F.C. circuit error
38	26		Indoor signal error
39	27		Indoor signal error
40	28		Indoor heat exchanger temperature sensor (inlet) error
41	29		Outdoor heat exchanger temperature sensor (middle) error
42	2A		Power supply frequency detection error
43	2b		Compressor temperature error
44	2C		4-way valve error
45	2d		Heat sink thermistor P.F.C. error
46	2E		Indoor unit damper error
47	2F		Inverter error
48	30		Low pressure error
49	31		Refrigerant circuit address set-up error
50	32		Master unit, Slave unit set-up error
51	33		Connected the indoor number set-up error
52	34		P.F.C. printed circuit board error
53	35		Indoor fan 2 error
54	36		Control box thermistor error
55	37		Indoor unit CT error
56	38		Indoor fan motor 1 driving circuit error
117	11		Indoor fan motor 2 driving circuit error
118	12		RAC
119	13		Serial communication error between indoor/outdoor units
120	14		Remote controller communication error
121	15		Communication error between outdoor units
122	16		Network communication error
123	17		Scan error
133	21		Peripheral unit communication error
134	22		Electricity charge apportionment error
135	23		Indoor unit initial setting error
136	24		Indoor unit capacity abnormal
137	25		Incompatible series connection error
138	26		Connection unit number error
139	27		Connection pipe length error
140	28		Indoor unit address setting error
141	29		Master/slave unit setting error
149	31		Other setting error
150	32		Connection unit number error in wired remote controller system
151	33		Indoor unit power supply abnormal
152	34		Indoor unit main PCB error
153	35		Indoor unit display PCB error
154	36		Power relay error
155	37		Indoor unit manual auto switch error
			Heater relay error
			Indoor unit transmission PCB error

156	38		Network convertor PCB error
157	39		Indoor unit power supply circuit error
158	3A		Indoor unit communication circuit (wired remote controller) error
165	41		Indoor unit room temp. thermistor error
166	42		Indoor unit heat ex. temp. thermistor error
167	43		Humidity sensor error
168	44		Light sensor error
169	45		Gas sensor error
170	46		Float sensor error
171	47		Water temperature sensor error
172	48		Warm water flow rate sensor error
173	49		Heater sensor error
181	51		Indoor unit fan motor 1 error
182	52		Indoor unit coil (expansion valve) error
183	53		Indoor unit water drain abnormal
184	54		Air cleaning function error
185	55		Filter cleaning function error
186	56		Water circulation pump error
187	57		Indoor unit damper error
188	58		Indoor unit intake grille position error
189	59		Indoor unit fan motor 2 error
195	5U		Indoor unit miscellaneous error
197	61		Outdoor unit power supply abnormal
198	62		Outdoor unit main PCB error
199	63		Outdoor unit inverter PCB error
200	64		Outdoor unit active filter/PFC circuit error
201	65		Outdoor unit IPM error
202	66		Convertor distinction error
203	67		Outdoor unit power short interruption error (protective operation)
204	68		Outdoor unit magnetic relay error
205	69		Outdoor unit transmission PCB error
206	6A		Outdoor unit display PCB error
213	71		Outdoor unit discharge temp. thermistor error
214	72		Outdoor unit compressor temp. thermistor error
215	73		Outdoor unit heat ex. temp. thermistor error
216	74		Outside air temp. thermistor error
217	75		Outdoor unit suction gas temp. thermistor error
218	76		Outdoor unit operating valve thermistor error
219	77		Outdoor unit heat sink temp. thermistor error
220	78		Expansion valve temperature sensor error
229	81		Receiver liquid level detection sensor error
230	82		Outdoor unit sub-cool heat ex. gas temp. thermistor error
231	83		Outdoor unit liquid pipe temp. thermistor error
232	84		Outdoor unit current sensor error
233	85		Fan motor current sensor error
234	86		Outdoor unit pressure sensor error
235	87		Oil sensor error
245	91		Outdoor unit compressor 1 error
246	92		Outdoor unit compressor 2 error

247	93		Outdoor unit compressor start up error
248	94		Outdoor unit trip detection
249	95		Outdoor unit compressor motor control error
250	96		Open loop error (Field-weakening relevant)
251	97		Outdoor unit fan motor 1 error
252	98		Outdoor unit fan motor 2 error
253	99		Outdoor unit 4-way valve error
254	9A		Outdoor unit coil (expansion valve) error
259	9U		Outdoor unit miscellaneous error
261	A1		Outdoor unit discharge temperature 1 error
262	A2		Outdoor unit discharge temperature 2 error
263	A3		Outdoor unit compressor temperature error
264	A4		Outdoor unit pressure error 1
265	A5		Outdoor unit pressure error 2
266	A6		Outdoor unit heat exchanger temperature error
267	A7		Suction temperature abnormal
268	A8		Poor refrigerant circulation
269	A9		Current overload error
270	AA		Outdoor unit special operation error
271	AC		Ambient temperature error
272	AF		Out of the possible operation range
273	AJ		Freeze protection operated
277	C1		Peripheral unit main PCB error
278	C2		Peripheral unit transmission PCB error
279	C3		Peripheral unit PCB 1 error
280	C4		PCB 2 error
281	C5		PCB 3 error
282	C6		PCB 4 error
283	C7		PCB 5 error
284	C8		Peripheral unit input device error
285	C9		Display device error
286	CA		EEPROM error
287	CC		Peripheral unit sensor error
288	CF		Peripheral unit external connector error (USB memory)
289	CJ		Other parts error
293	F1		System tool software error
294	F2		System tool adaptor error
295	F3		System tool interface error
296	F4		System tool environment error
309	J1		RB unit error
310	J2		Branch boxes error
311	J3		Total heat exchanging, ventilation unit error
312	J4		Domestic hot water unit error
313	J5		Zone control interface error

11.3. VRF V/S/J Series Error Codes

Error code	Error in the RC	System	Error description
0	0	VRF V / S / J Series	No Error
2	2		Model information Error
4	4		Power frequency Error
6	6		EEPROM access Error
7	7		EEPROM deletion Error
9	9		Room sensor Error
10	0A		Heat Ex. Middle Sensor Error
11	0b		Heat Ex. Inlet sensor Error
12	0C		Heat Ex. Outlet sensor Error
13	0d		Blower temperature thermistor Error
17	11		Drain Error
18	12		Room temperature Error
19	13		Indoor fan motor Error
20	18		Standard wired remote Error
31	1F		Standard wired token Error
32	20		Network communication Error
33	21		Node setting error
34	32		Communication Error between Main PCB & Transmission PCB
			Outdoor unit Error

NOTE

If you detect a non-listed error code, please contact Fujitsu technical support.
