

- Valve with thermal motor
- Temporary operation (max.12h)

## Round control dampers with thermal motor type KRK-E

Round control valves with thermal motor, opened when under current

### Application

- For air regulation in ventilation and airconditioning systems, cookerhoods, ...
- Limited time under current of max. 12 hours
- Max. Use temperature 60°C

### Material

- Valve and housing made of fire retardant plastics
- Connections at both sides of the valve made of galvanized steel

### Colour

- Black housing and valve
- Galvanized steel duct connections

### Composition

- Round body with valve
- Electrical connection box containing the gear mechanism and thermal motor.
- duct connection flanges

### Mounting

- To be mounted in between two round ducts
- Connected to current 230V by 2 wires

### Text for tender

- The air regulation valves shall be of the round type in fire retardant plastics, equipped with a thermal motor. The valve will open at a current of 230V and will automatically close when there's no more current. The valve will have two round duct connections in galvanized steel.
