

Connection spigot type FLEXCON

Push-in connection

Brand

- Ventichape

Application

- This push-in connection made of PP, is designed for an airtight connection (if an O-ring is provided) between the flexible ducts and the subcollectors or the central collectors. This means that two push-in connections always need to be provided for each flexible duct. If the ducts are not put into the cement screed, it is possible to make an airtight connection by using an O-ring, type **VCOR** (to order separately).

Specifications

The VCPI executions in 63,70 and 90millimeters are equipped with bulges on the inside for better grip and two slots to able placement of the fixation bracket **FIXCON**.

Composition

- The handy clicking system of the push-in connection enables a quick and easy mounting

Accessories

Fixation bracket type **FIXCON**
Rubber sealing ring **VCOR**
